Author Audition

Meet Codex: OpenAI’s coding agent

Reads your repo

Writes the change

Runs your tests

You review the diff

Give it a task in plain English. It works in your repo like a teammate.

Codex app · CLI · IDE extension. Today: the Codex app on Windows.

Author Audition

Overview

Codex writes the code in minutes.
Now reviewing is the slow part.

📝 Writing — 5 min

🔎 Reviewing — 30 min

WHAT'S IN IT FOR YOU

Let Codex do the first review, so you only check what matters.

1 The writer → 2 The editor → 3 The proof

Codex built it. The tests pass. Ship it?

app/profile.py

```
destination = AVATAR_DIR / f"{uuid4().hex}{suffix}"
with destination.open("xb") as target:
    try:
        copyfileobj(file, target)
    except Exception:
        destination.unlink()
        raise
```

💬 The task

Let users upload a profile photo.

✅ **9 tests passed**

✅ **Even handles errors**

🤔 **Would you approve this?**

Hold that thought.

Tests check what we asked for. Not what we forgot to ask.

Great writers don’t edit their own first draft

vs

The writer

“Did I build what was asked?”

The editor

“What could go wrong?”

Same Codex. Two hats. Never both at once.

Switch hats with /review

1

Type /review
in the composer

2

Pick what to review
Uncommitted = Codex’s new edits

3

Read the findings
On the lines, most important first

4

You decide
Codex changes nothing yet

What can it review?

Uncommitted changes

↑ today

Against a base branch

Author Audition

Point at the line. Keep the fix small.

```
def upload_avatar(user_id, file):

    ...

+       with destination.open("xb") as target:
```

💬 **Your comment**
If saving fails, delete the half-saved file.

You send:
“Address the inline comments and keep the scope minimal.”

Codex: 1 fix + 1 test.
Nothing else touched.

Build → **Review** → **Commit**

Never jump straight from Build to Commit.

Demo

The writer, then the editor.

Same Codex, same app.

1. **Ask Codex to add profile photo upload**
2. **/review → uncommitted changes**
3. **Comment on the risky line**
4. **Small fix, then review again**

One review. One real risk caught.

📝 Writer only	📝 + 🔎 Writer and editor
✓ Photo upload works	✓ Photo upload works
✓ 9 tests pass	✓ Tests pass, plus 1 new test
✗ Disk full? A broken file is left behind	✓ Failed saves are cleaned up

The tests were green both times. The review made the difference.

Your turn: one habit

`/review`

After every Codex task. Before every commit.

- 📁 **What if it fails halfway?**
- 🔑 **Who is allowed to do this?**
- 💥 **What if the input is empty or huge?**

Questions the editor asks. Check that the findings cover them.

Summary

Review is the new bottleneck

Switch hats: /review before commit

Point at the line. Keep the fix small

Codex finds. You decide
